

ABSTRACT OF THE DISCLOSURE

[34] A method of using a fluid-transfer collection assembly includes providing a fluid-transfer collection assembly including an inlet for receiving one or more fluids, the inlet including an inlet check valve, an outlet including an outlet check valve, a test media,
5 and a depressable, flexible bulb pump located between the inlet and the outlet and including an interior; depressing and releasing the bulb pump to draw one or more fluids into the interior of the bulb pump through the inlet check valve; and depressing the bulb pump again to impart a positive pressure in the interior of the bulb pump to cause one or more fluids in the interior of the bulb pump to exit the interior of the bulb pump
10 through the outlet check valve and be transferred to the test media.
